For more information call 1300 55 22 00 | info@dunlopfoams.com.au | www.dunlopfoams.com.au
Dunlop Foams is a PACIFIC BRANDS company.

Dunlop Foams has earned their pre-eminent position in the marketplace - from domestic furniture and bedding to specialist applications such as aircraft seating, healthcare and packaging.

In every aspect of performance, comfort, durability and shape retention, Dunlop Aerofoam sets the benchmark, and through consistent innovation, research and development is the first choice for aviation.

DUNLOP AEROFOAM:

- ▶ Comfort levels are optimised and tailored to match the requirements of individual aircraft fleet operators;
- ▶ All cushioning components are backed by Dunlop Foams warranties and designed to provide longevity of comfort and support under in-service conditions;
- ▶ Ongoing research and development into new Aerofoam cushioning materials ensures compliance with customer and statutory requirements;
- ▶ Aerofoam cushioning components are developed and manufactured under an ISO9000 certified quality system and all materials undergo flammability testing on every batch.

FIRST CHOICE FOR DURABILITY AND SAFETY

As well as achieving high fire retardancy ratings, Aerofoam has been tested to the most rigorous standards for endurance and fatigue. In testing to ISO 3385, a foam sample undergoes 80,000 pounding cycles under controlled conditions of temperature and humidity. In testing to AS2282.12, a foam sample is compressed to 25% of its original height by a roller moving over it 20,000 times.

All Dunlop Foams products are totally recyclable and made without the use of ozone-depleting CFCs.

FIRST CHOICE IN ANTI-MICROBIAL PROTECTION

Aerofoam has the built-in protection of Ultra-Fresh, an anti-microbial that inhibits the growth of a wide spectrum of infectious bacteria, fungi, moulds and mildew.

Ultra-Fresh preserves the hygienic freshness of Aerofoam, increases the lifespan and has been proven effective against all top 15 bacteria indicated by the Centre for Disease Control in the USA, including Staphylococcus aureus.
